

ANTAR

AI FOR DIGITAL PUBLIC INFRASTRUCTURE & GOVERNANCE

Citizen voice meets data-driven policy.
A Digital Public Good powered by Google Gemini.

Build with AI: Code for Communities

TEAM ALGOCODERS

THE PROBLEM

INDIA'S GOVERNANCE FEEDBACK LOOP IS BROKEN

Citizen feedback lives in fragmented, disconnected systems across 543 constituencies.

Development requests never reach the right policymaker at the right time.

No data-driven way to prioritize where public money should go.

22+ languages create barriers to inclusive civic participation.

The feedback is digital, but the people waiting for change are real.

543

CONSTITUENCIES

Fragmented feedback systems with no unified data layer

22+

LANGUAGES

No inclusive voice channel for non-English speakers

0

DATA-DRIVEN SPEND

Public spending decisions made without demand data

WHAT IF EVERY CITIZEN'S VOICE SHAPED POLICY?

Introducing ANTAR — two interfaces connected by one AI engine.

CITIZEN AWAAZ

Citizens report infrastructure issues via voice or text in their native language.

Every report is tagged with location and tracked to resolution.

AI

MP CONSOLE

Policymakers see constituency analytics — gap maps, scatter plots, budget simulations, and AI recommendations.

Auto-generated PDF briefs for ministry meetings.

CITIZEN AWAAZ

REPORT. TRACK. BE HEARD.

Voice & Text Reporting

Citizens describe issues in their native language via voice recording or text — no English required.

Smart Categorization

Issues auto-classified into Roads, Water, Sanitation, Electricity, Health, School, and more using Gemini AI.

Google Maps Tagging

Every report is pinned to an exact location on Google Maps — enabling geographic analysis at scale.

Real-Time Tracking

Citizens track their issue from submission through resolution — closing the accountability loop.

5 Languages: English Hindi Bengali Tamil Portuguese

MP CONSOLE

DATA-DRIVEN GOVERNANCE AT YOUR FINGERTIPS

GAP MAP

Geographic heatmap overlaying citizen demand hotspots with existing infrastructure coverage. Identifies underserved villages where investment is most needed — powered by Google Maps.

QUADRANT ANALYSIS

Scatter-plot analytics plotting infrastructure gap vs. citizen demand across every village. Helps MPs prioritize: high-gap + high-demand issues demand immediate action.

SIMULATE. RECOMMEN

VILLAGE DEEP-DIVE

Tap any village on the map to see infrastructure coverage (roads, water, toilets, electricity, internet), gap analysis by sector, and AI-generated insights.

AI RECOMMENDATIONS

Gemini analyzes aggregated citizen requests against demographic and infrastructure data to generate prioritized project suggestions matched to government schemes (PMGSY, Jal Jeevan, KUSUM).

PROJECTED IMPACT

Track gap score reduction over time, people reached, and investment needed — with before/after projections.

POWERED BY GOOGLE AI

Mandatory Google AI integration across the entire platform.

GEMINI API

Core AI engine. Analyzes aggregated citizen grievances against national demographic and infrastructure data. Generates prioritized policy recommendations and project rankings.

CLOUD SPEECH-TO-TEXT

Enables voice-based issue reporting in multiple Indian languages. Citizens speak naturally — AI transcribes, classifies, and routes their feedback automatically.

GOOGLE MAPS PLATFORM

Location tagging for every citizen report. Powers the Gap Map visualization — geographic heatmaps revealing infrastructure coverage gaps across constituencies.

TRANSLATION API

Real-time multilingual support across India's linguistic regions. Hindi, Bengali, Tamil, English, Portuguese — with architecture ready for all 22 scheduled languages.

BUILT FOR INDIA, AT SCALE

Designed as a Digital Public Good — open, scalable, deployable.

at Scale

- Works offline in demo mode — Firebase-ready for production
- One ward to national deployment — same architecture
- Expandable to all 22 scheduled Indian languages
- Open-source, auditable, government-ready

TECHNOLOGY

End-to-end stack built for performance, scale, and accessibility.

FRAMEWORK

Flutter (Dart)

Cross-platform mobile app
with single codebase

AI / GenAI

Google Gemini API

Policy recommendation
engine & text analysis

MAPS

Google Maps Platform

Location tagging &
gap-map visualization

BACKEND

Firebase

Auth, Firestore, Storage
Real-time sync

VOICE

Speech-to-Text + TTS

Multilingual voice input
and audio feedback

CHARTS

FL Chart

Interactive scatter plots
and budget visualizations

STATE

Riverpod

Reactive state management
with code generation

ROUTING

GoRouter

Declarative navigation
with deep linking
